ChromeVET®

ChromeVET® | A Product Line by **Securos Surgical®**

The Story. *The headlamp that started a revolution.*

It all started in 2004 when we launched the Classic. A basic, soft-strapped single LED headlight designed for lighting when suturing. LED's were still so new that users were baffled by its convenience. The rest is history. We 'saw the light' as the first in surgical LED headlights.

Why ChromeVET®?

The ChromeVET® is so efficient that a surgery can be done cord-free at Xenon or Halogen brightness. Alternatively, while competing LED headlights are convenient and affordable, they still fall short with fragile tethered belt battery packs and other problems.

ChromeVET® is the solution. As the brightest LED headlight on the planet, it eliminates these tradeoff's once and for all.

The ChromeVET® Difference

Portability. The only truly cordless surgical headlamp with enough battery life to last for over a day and even weeks without charging. Be free of belt packs and cables.

Comfort. With the power designed into the custom headstrap, this patented technology offers comfort and padding options to last you through the day without headaches.

Brightness. The all-new ChromeVET® is now the brightest Veterinary LED headlight in the world.

Design. With a patented LED module system, there is no buzzing fan or bulky light modules. There's a reason why we're voted the best looking headlamp.

ChromeVET®

Headstrap Technology

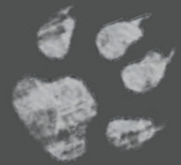

The New ChromeVET® Sets a New Standard

The patented headstrap is Truly Cordless.
It was engineered with one thing in mind: reduction.

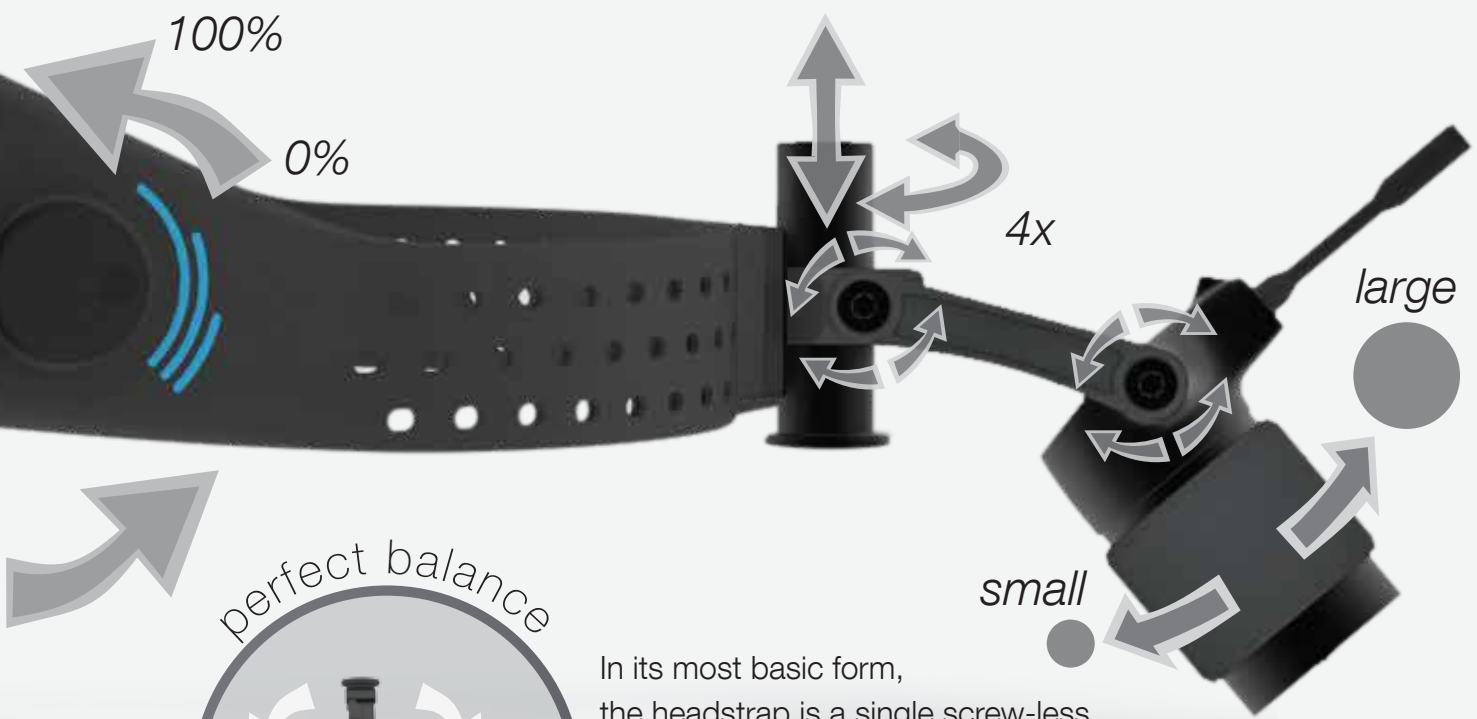

Two rechargeable batteries are embedded within the headband. Don't worry about which battery is charged - the batteries talk to each other. With our balanced battery Dual-Sync™ circuit technology, a battery can be changed or charged from either side without losing light.

Once the headlight is on, beam positioning is key to light up exactly where you want to see. This is why the bracketing system includes up to 4 pivotal points. The light intensity and beams are also continuously adjustable

In its most basic form, the headstrap is a single screw-less sheet of plastic that creates a comfortable well balanced headlight wear. The batteries are balanced to provide the perfect center of gravity.
